

Harmony Portfolios AUD Growth Fund*

Investment objectives

The investment objective is to provide capital growth in Base Currency terms but with a reduced level of volatility via strategic exposures to property and fixed income investments. The Fund is ideally suited to investors with an above average risk tolerance and with an investment horizon of 5 years or longer.

Market commentary

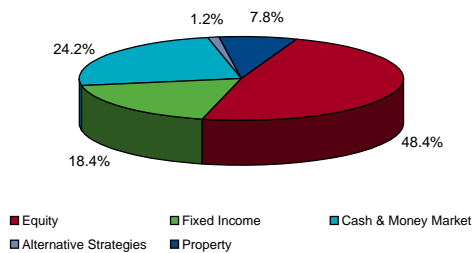

Following a torrid few months, risk appetite returned to investment markets in July. As a result, the second half of 2010 has begun with rather a better tempo than the first half finished. The stress test result for the European banking sector was an important event in the month of July. Overall the conclusions were positive, despite a study which might be thought of as less than exhaustive. The Committee of European Banking Supervisors (CEBS) suggested that seven of 91 EU banks failed to achieve a tier one capital ratio of 6% under a series of macroeconomic scenarios

Global developed equities ended the month having posted strong gains, with the MSCI World returning 8.1% in US Dollar terms. Emerging markets also delivered positive performance with the MSCI Emerging Markets index adding 8.3% to nose ahead of global equities. Government bonds also rallied 3.4% in USD terms. The US Dollar weakened against most currencies for the second month in a row. This provided a tailwind to performance where foreign currency returns are reported in US dollar terms.

The fund's underweight exposure to the Australian Dollar and Aberdeen's focus on quality stocks were the two main reasons for its relative underperformance for the month of July. Tiburon finished well ahead of its benchmark and this manager continues to add relative and absolute value through excellent stock picking.

Risk Warnings

- Past performance of any investment is not necessarily a guide to the future. All performance is calculated Total Return, Net of all fees and in US Dollar terms.

- Fluctuations in the value of the underlying funds and the income from them and changes in interest rates mean that the value of the Fund and any income arising from it may fall, as well as rise, and is not guaranteed.

- Deductions of charges and expenses mean that you may not get back the amount you invested.

- The fees charged within the Fund and by the managers of the underlying funds are not guaranteed and may change in the future.

- Higher risk investments may be subject to sudden and larger falls in value in comparison to other investments. Higher risk investments include, but are not limited to, investments in smaller companies, even in developed markets, investments in emerging markets or single country debt or equity funds and investments in high yield or non-investment grade debt.

- Notwithstanding ongoing monitoring of the underlying funds within the Fund, there can be no assurance that the performance of the funds will achieve their stated objectives.

- The Fund may contain shares or units in underlying funds that invest internationally. The value of your investment and the income arising from it may therefore be subject to exchange rate fluctuations.

- The Fund may contain shares or units in underlying funds that do not permit dealing every day. Investments in such funds will only be realisable on their dealing days. It is not possible to assess the proper market price of these investments other than on the fund's dealing days.

- Investment in the Fund may not be suitable for all investors. Investors should obtain advice from their financial advisor before proceeding with an investment.

- Certain unregulated Collective Investment Schemes may permit a greater degree of leverage than is permitted with investment funds that are available to the general public in the UK. Such Collective Investment Schemes have a greater underlying volatility, which increases the risk of loss.
